You can participate from you own classroom, office, or home.

All you need is a computer with Internet access and headphones or speakers.

REGISTRATION INFORMATION

The cost of each workshop is $58 or 2 ETTC Hours.

Pre-registration is required at
www.ettc.net/cal

- Upon registration, the instructor will email you with the workshop website and provide you with a logon for that particular session.

- Professional development certificates will be mailed to you following the workshop.

- The instructor for all sessions is Mr. Art Wolinsky who is a frequent presenter for the SRI/ETTC. As a teacher, technology consultant and certified "Big6" Trainer and Macromedia Educational Leader, he is always exploring innovative ways to utilize technology for instructional purposes.

- Material presented is aligned to the New Jersey Core Curriculum Content Standards, including the newly adopted Technology Literacy Standards, and to the Cumulative Progress Indicators specific to each set of grade levels.

- PLEASE NOTE: If you have taken any of these workshops in previous years, they could be credited toward certificate completion. Contact the ETTC for more information.

Southern Regional Institute (SRI) and ETTC presents

Online Workshop Series

Cyber Safety & Information Literacy

Web-Based Interactive Presentations in Real Time offered at your desktop! Chat with the Instructor, chat with other participants - without leaving your classroom!

2007-2008 Online Workshop Series
Cyber Safety and Information Literacy

The SRI/ETTC has created a new certificate series to help teachers understand the connection between the online world and the real world. Presented in real time through web-based interactive presentations, these workshops will help participants understand the value as well as the dangers associated with today's "online" community.

The Cyber Safety and Information Literacy Certificate Series includes 12 one-hour workshops that are hands-on guided professional development sessions offered at your desktop. Participants may register for each session individually and after completing 9 of the workshops will be issued a certificate signed by the Southern Regional ETTC and WiredSafety.org. Registration information can be found on the back of this brochure.

WORKSHOP DESCRIPTIONS

Copyright and Fair Use in the Classroom
Do you know what you can and can't do in the classroom under copyright law and fair use guidelines? You might be surprised to learn that in some areas you have more leeway than you think and in other cases you are breaking the law.

Forensic Problem Solving and Einstein
This workshop addresses a wide range of core curriculum standards. It demonstrates a lesson for students using fifteen seemingly meaningless clues to track down a hacker who has broken into a movie studio computer and stolen three unreleased movies. Based on a puzzle created by Einstein, students will create complex profiles of all the suspects with seemingly useless fragments of information, and learn that Internet predators can do exactly the same thing with bits of information that children supply.

Making & Configuring a Blog at Blogger.com
This is a step-by-step presentation that shows teachers how to set up a personal or classroom blog at Blogger.com. While Blogger offers a simple three-step process, this "default" setup is not sufficient for educational use. This presentation takes you through dozens of settings and explains their application in creating a secure educational space.

Web 2.0 in Education
In today's Web 2.0, users are the creators of content rather than just the consumers. Blogs, Wikis, and social networks are on the forefront but are just one part of an exploding culture of communication. Come find out more about the new interactive web and what's coming down the line.

How to Avoid PowerPoint Poisoning
PowerPoint can turn mediocre presenters into poor presenters. Design concepts and audience consideration will be discussed for the development of presentations. This workshop will provide simple guidelines and techniques to help make participants better presenters.

CyberBullying
Bullying has moved from the classroom and the playground to the Internet and anywhere kids communicate electronically. It's not just children who are victims. Schools and adults including teachers, and administrators are now fair game. How do you deal with this phenomenon in the classroom? How can schools balance discipline in light of the First Amendment? This workshop will help participants learn more about this growing issue.

Wikis and Wikipedia in Education
Wikipedia is the world's most popular encyclopedia on line or off line and the most visited site on the Internet. It is used extensively by students for research, yet many teachers and students are unaware of the dangers and pitfalls of using it as their main source of information. But there is an entire Wiki World beyond Wikipedia and this workshop will help you explore the possibilities

Social Networking Today and Tomorrow
Mention the word MySpace and parents quake in their shoes, administrators bar the doors, teachers scratch their heads, and kids just smile. MySpace and social networking has taken the adult world by surprise and put us in a reactionary mode. As disruptive as the current social networking sites are, they may only be the tip of the iceberg that is floating right into the path of the educational Titanic. Get a better understanding of social networking facts and fears.

Introduction to the Big6
The Big6 is the most used problem solving and research method used in the K-12 world. Big6 book author and certified Big6 trainer, Art Wolinsky will give you an overview of the process, how, and why it works and whether it is right for you and your students.

Evaluating Information
The validity of information at web sites is an important issue in doing quality research. Participants will achieve an understanding and critical eye for evaluating the validity of information that is found on web pages. Beyond the world of research, the ability to evaluate the quality of information you encounter online can help you avoid scams and predators. This course will provide you with tools and activities you can use with your class tomorrow.

Video Tips and Techniques
While PowerPoint is the presentation tool of choice for many, our students live in a visual and interactive world. Visual literacy and videography are important skills to have. This presentation created with the help and permission of Andy Carvin, provides teachers with tips and techniques used by the pros.

Beware of Geeks Bearing Gifts
When you and I were growing up, the words Trojans, worms, viruses, and spam had considerably different meanings than they do today. We took a pole and went fishing, but today we encounter phishing expeditions and electronic bait trying to hook us. We are victimized by spyware, adware, and malware of all types. These electronic "parasites" can be sucking your personal data and affecting the performance of your computer. This course will give you a better understanding of these dangers and how you can deal with them.
